Here's a structured table that organizes the microbial organisms and their respective fermented food applications from your text:

Table: Microorganisms and Their Roles in Food Fermentation

Microorganism	Examples / Species	Fermented Food Types / Processes	Notes
Yeasts (<i>Saccharomyces cerevisiae</i>)	<i>S. cerevisiae</i>	- Alcoholic fermentation (beer, wine, whisky, Baijiu) - Sourdough	Major alcohol fermenter; domesticated in brewing and baking; co-exists with LAB in some processes
Lactic Acid Bacteria (LAB)	<i>Streptococcus thermophilus</i> , <i>Lactobacillus helveticus</i> , <i>L. delbrueckii</i> , <i>Fructilactobacillus sanfranciscensis</i> , <i>Lactobacillus</i> , <i>Limosilactobacillus</i> , <i>Lp. plantarum</i> , <i>Lm. fermentum</i> , <i>Lv. brevis</i>	- Dairy (yogurt, cheese) - Vegetables, meats, wines - Sourdough - Back-slopped cereal fermentations - Alcohol-free cereal beverages - Baijiu	Contribute to acidification, flavor, and texture; essential in sourdough and cheese ripening; dominant in spontaneous plant fermentations
Acetic Acid Bacteria	Various genera	- Alcohol-free cereal beverages - Kopi Luwak (civet coffee, in gut microbiota)	Convert ethanol to acetic acid; contribute to acidity
Fungi (Molds & Non- <i>Saccharomyces</i> Yeasts)	<i>Aspergillus oryzae</i> , <i>Penicillium roqueforti</i> , <i>Monascus purpureus</i> , <i>Rhizopus stolonifer</i> , <i>Kazachstania humilis</i>	- Koji (soy sauce, sake, miso) - Blue cheese - Colored cereal foods (red/yellow rice) - Tempeh (soy) - Sourdough - Daqu and Baijiu (Chinese starters/liquors)	Provide enzymes (saccharification, proteolysis), flavor, and color; some species (e.g., <i>Monascus</i>) also produce toxins
Other Bacteria	- <i>Enterobacteriaceae</i> (<i>Cronobacter</i> , <i>Kosakonia</i> , <i>Klebsiella</i> , <i>Citrobacter</i>) - <i>Enterococci</i> , <i>Lactococci</i> , <i>Leuconostoc</i> , <i>Weissella</i> - <i>Tetragenococcus halophilus</i> - <i>Bacilli</i> (incl. <i>B. subtilis</i>) - Firmicutes, Bacteroidetes, Actinobacteria, Proteobacteria	- Spontaneous plant fermentations (vegetables, cereals, tubers, coffee, cocoa) - Natto (<i>B. subtilis</i>) - Surströmming (fermented fish) - High-salt fermentations (>10% NaCl, e.g., soy sauce, fish sauce) - Daqu (fermentation starter) - Baijiu (Chinese liquors)	Early colonizers in spontaneous fermentations; drive microbial succession; some dominate in high-salt environments
